THE FRISCO EMPLOYES' MAGAZINE

March 1926 Vol. III No. VI

ENGINEER H. E. DAIN, of the Missouri, Kansas & Texas Lines, who has carried a Hamilton for fourteen years. Engineer Dain is at the throttle of the train conducted by G. W. Oliver, whose picture is shown opposite.

CONDUCTOR G. W. OLIVER, of the M. K. T., purchased his first Hamilton early in the 1890's and his second one in 1906. For the past twenty years this watch has been on duty with Conductor Oliver, rendering accurate time service.

When a Railroad Man Buys a Watch

Prior to the advent of railroads, accurate watches were the playthings of Kings, Princes and Notables. Watches in those days were large, ornate affairs and of a timekeeping quality that had better not be discussed. Today the railroad men of America demand from their watches a degree of accuracy that King George III could have called for in vain. The intricacies of railroad schedules have demanded, first of all, a standard time, and next a timepiece that would mark standard time with accuracy.

No one knows better than a railroad man the value of a good watch—a watch that keeps time accurately and well within time inspection requirements. They demand watches that deliver, with reasonable care, accurate service day after day and year after year.

That is why most railroad men select the Hamilton when they buy a watch. Railroad men have been buying Hamiltons since 1893. Many of the earlier purchasers, desiring improved models, or 16-size rather than the old 18-size, have replaced their first Hamiltons with new Hamiltons. It it significant that most men who have had experience with Hamilton Watches again purchase Hamiltons, whether the new watch is desired for themselves or for a gift. Facts such as these show that men who know Hamilton accuracy cannot be satisfied with anything else.

You, too, can have the time satisfaction that comes with owning a Hamilton. Ask your jeweler to show you the Hamilton railroad model here pictured. This model is the famous Hamilton 992, 21 jewel with eight adjustments. It is fitted in a case designed especially for railroad men. In this case we have incorporated a dust-proof feature that amply protects the fine mechanism from all dust particles.

If you would like further information about the Hamilton railroad models, write to our Advertising Department asking any questions you have in mind. We will be glad to send you a copy of our Hamilton time book, as well as a little booklet on "The Care of Your Watch"—these we have published especially for railroad men and they are yours for the asking.
